## TERMA... we electrify

Welcome to Terma, a renowned specialist in heating solutions with expertise in two product groups:

- Firstly we excel in crafting state-of-the-art designer radiators
- Secondly we produce a wide range of technologically advanced electric heating elements.

Now, Terma proudly presents its we electrify brochure, which showcases the seamless marriage of our exquisite radiator designs and innovative heating elements.

This diverse range of electric, oil-filled radiators caters to every taste, ensuring that our products enhance both the functionality and beauty of any space they occupy. Discover the future of warmth with Terma's oil-filled electric radiators, available in a vibrant array of colours unmatched in the industry, where elegance meets efficiency.

## we electrify in connectivity

Across our range, we offer three forms of connectivity to enhance your heating experience:

### WiFi

The latest fully SMART connectivity for worldwide remote control and full automation.

### Bluetooth

Connectivity that operates within a 10-metre radius, providing flexibility and convenience.

### Infrared

Classic direct line-of-sight control for quick and easy adjustments utilising our IR controllers.

CODE: WXESKOLD001

CODE: WXWZOR-KOLOR-2021

## we electrify in colour

Terma specialises in colour, setting inspiring trends in interior design. Our high-quality imagery, produced by our in-house graphics studio, showcases our radiators in realistic interior settings, highlighting the power of colour.

You can order any model in virtually any colour and we gladly accept single-unit orders, perfect for domestic customers possibly seeking one unique radiator. We can produce radiators in RAL colours (matt or silk) and a range of Special Colours unique to Terma, including both structural powder paints and premium wet paints. Each page of this brochure focuses on a different colour, with full colour palettes shown in the rear section.

66x Colour Display Boards and Terma Perspex Colour Boxes are available to purchase for showrooms.

Warp T ONE (internal) 1695x500, 800w, RAL 5018 Teal (Matt)

## we electrify in design and manufacturing

Terma's manufacturing plant is located in Gdańsk, in northern Poland. Since 1990, we have produced tens of millions of radiators, reaching customers in over 40 countries across four continents. In addition to designer radiators and electric heating elements, Terma also manufactures construction machinery and medical rehabilitation equipment.

Our plant has undergone a major expansion over the last few years. Our painting plant is now one of the most advanced paint lines in the radiator industry. The current method of securing the coating goes beyond the standard processes used in the radiator industry and is comparable to technologies used in the automotive market.

### radiator warranty extended to 12 years

At Terma, we don't just say we believe in our products – we back it up. Our confidence in the quality and performance of our radiators has led us to extend our standard warranty from 8 years to 12 years. It's a reflection of our belief that actions speak louder than words. Please note, our heating element warranty remains at 2 years, so for electric radiators, both warranties apply.

We remain true to the principles we value, focusing on innovation and authenticity, so rather than simply replicating existing ideas, we channel our energy into developing new products that meet the demands of an ever-evolving world.

We are committed to staying close to both our Business Partners and Consumers by actively participating in selected international fairs and local events. This helps us continually expand our product range and offer tailor-made solutions.

At Terma, we put our customers' needs first. This commitment ensures satisfaction with every solution we provide. We stand by the quality of our products and work hard to maintain reliable partnerships and effective after-sales support, delivering excellence at every stage.

We believe that thoughtful, efficient actions lead to sustainable growth. By investing in new technologies, we ensure our products meet the ever-changing expectations of our customers. Practising careful resource management also allows us to support initiatives that positively impact others.

We are deeply grateful for every order we receive. Customer feedback is invaluable to us, helping us continuously improve. We believe that being a good supplier means listening and serving, and we welcome high expectations from our clients.

Are we perfect? No. But our relentless pursuit of excellence is the driving force behind everything we do.

# how we work with our partners

This brochure has been created for a wide audience who want to bring an element of modernity, energy efficiency and design to their living and working spaces.

## Domestic Customers via Showrooms

Our unrivalled electric radiators are available in single-unit orders perfect for showrooms / online retailers offering a made-to-order service for the end user. Our website features a useful visualisation tool on each range, that allows you to customise the colour and rotate the radiator to view it from any angle. At the rear of this brochure you'll find a useful tear out Made To Order form.

### models we hold in stock

We carry select models in stock (UK and Poland), allowing for quick sourcing and installation within days. See the back page for more details

## Distribution Partners

For wholesale orders, we supply stock under the Terma brand or can offer an OEM (Original Equipment Manufacturer) service, allowing you to brand the products with your own name; MOQs (Minimum Order Quantities) apply for this. In some cases, we can also customise designs to differentiate your OEM version from standard Terma models. We also provide guidance on which models/colours to warehouse, helping you avoid overlap with our stock models. At the rear of this brochure you'll find a tear out enquiry form for distributors.

## Architects and Interior Designers

We have designed this brochure to inspire professionals to blend modern heating technologies with elegant design, creating sophisticated interiors.

## Installers and Service Technicians

Find detailed technical information and advice for easy, fast, and efficient installation and operation of our electric radiators and heaters.

## Environmentalists

Our products minimise impact through both efficiency & recyclability.

# selecting your electric radiator

Our electric radiators come pre-filled with oil and supplied as a fully sealed unit with the heating element already installed\*. You can choose the element's location (left or right) as well as the type of plug and cable (see page 126 for details). For all Terma radiators, the heat output is specified in watts, representing the power of the pre-fitted electric heating element. The wattage is fixed, indicating the maximum heat output the radiator can deliver.

You have the flexibility to pair your chosen radiator with the heating element that best suits your needs, taking into account:

- 1. Shape: You can select an element that complements the shape of your radiator. We offer heating elements in both round and square designs.
- 2. Features & Benefits: More importantly, you can choose your element based on its functionality and convenience:
  - > Preferred connectivity: WiFi, Bluetooth, infrared or manual.
  - > Time controls: What scheduling options do you need?
  - > Heat settings: What level of temperature customisation you prefer.

In this brochure, we've paired a wide selection of radiators with the most suitable heating element for each model, presenting a harmonious design. While many models are compatible with any heating element, some are restricted to specific ranges, and we provide recommendations for the best option. Next to each model, you'll find the 'Suggested Element' for that size. Be sure to review all the guidance notes throughout the brochure, as well as the detailed technical advice section at the back, to help you select the perfect element for your radiator. The made-to-order form, along with configuration code creation guides, are all located at the back of the brochure.

\*For radiators that will be shipped over long distances, we recommend choosing VEO/KTX elements, where only the probe is pre-fitted inside the radiator and the controller is packed separately, to help prevent potential transit damage.

class 1

class 2

**\*Note:** Class 2 is a double-insulated electrical device that has no earth wire – typical for installations in France / Spain (but can be used anywhere).

Class 1 is standard where an earth wire is used.

# heating element choices

Here are all of our heating elements in order from our most advanced VEO wifi element down to our entry level SIM element. You can pair the vast majority of our radiators with any element.

**Exception 1** - The larger, higher output models within a range, requiring 1.5kw and over, can only be paired with the VEO, which goes up to 2.0kw.

**Exception 2** - When the element will be installed horizontally only pair with KTX / VEO ranges (or any Class 2 element) - see page 125 for more information.

Class 1	Class 2*	Visual	Primary Features & Benefits
VEO	SEO		Premium Terma SMART Wi-Fi controlled element, choice of internal temp 30-60°C or ambient room temp 15-28°C, 7 day timer, geo location operation so knows when you're nearing home and will automatically switch the temperature up for you, compatible with VTS temp/humidity sensor & VOS open window sensor, 2hr drying function, IPX5. *Requires separate SS1 (class 1) / SS2 (class 2) heating element probe – 120w to 2000w.
MOA BLUE	SOA BLUE		Bluetooth controlled element, choice of internal temp 30°- 60°C or ambient room temp 15-30°C, 7 day timer. 2hr drying function, IPX5, 120w to 1200w.
MOA	SOA		Manually controlled, 5 settings 30-60°C regulating the internal temp, 5 LEDs, 2 hr drying function, IPX5, 120w to 1200w.
MOA IR	not available		Infrared controlled element (via separate TTIR or DTIR controller), 5 settings 30-60°C regulating the internal temp, 5 LEDs, 2 hr drying function, IPX5.
DRY	SEC		1 temp setting of 48°C (can be re-programmed to other temp) regulating the internal temp, 5 LEDs, 2 hr drying function, IPX5. Note: We also offer another element called 43D (class1), which is pre fixed at 43°C operating temp (used regularly in the UK as this is the required setting for LST (low surface temperature).
TDY	not available		Unique element for hotels & public spaces whereby element automatically turns itself off after 2 hours to prevent it from being left on (can be changed between 60 to 180 minutes), no continuous operation mode available. 3 settings 40, 50 & 60°C regulating the internal temp, 5 LEDs, 2 hr drying function, IPX5.
MEG	not available		Entry level, manually controlled element, 5 settings 30-60°C regulating the internal temp, no timer, 5 LEDs, IPX4.
KTX-4 BLUE	not available		Bluetooth controlled element, choice of internal temp 30-60°C or ambient room temp 15-30°C, 7 day timer. 2hr drying function, IPX5. *Requires separate TS1 (class 1) / TS2 (class 2) heating element probe – 120w to 1000w.
KTX 1 to 4	SKT 1 to 4		KTX 4: Infrared controlled element (via separate TTIR or DTIR controller), 30 settings 30-60°C in 1°C steps, regulating the internal temp, 24 hr timer, 0.5 - 4hr drying function, IPX5. KTX 1 to KTX 3: Older versions – see the comparison table at rear for differences between these models. *Requires separate TS1 (class 1) / TS2 (class 2) heating element probe – 120w to 1000w.
ONE (external)	not available		Unique shaped heating elements for seamless match to a Terma radiator. Available in 5 profiles: Circle (R36), D shape (D), Square (K 30x30), Rectangle (P 30x40) and Trapezium (T36x40). 2 settings: 45/60°C, regulating the internal temp. 2hr drying function, compatible with DTIR / TTIR infrared controllers.
ONE (internal)	not available		Fully internalised heating element where all electronics are pushed up inside the radiator leaving a neat, small black extension the same shape as the radiator on show (*must be ordered at same time as radiator and cannot be retro fitted). 2 settings 45/60°C, regulating the internal temp. 2hr drying function, compatible with DTIR / TTIR infrared controllers.
SIM	SIS		Entry level heating element, with one fixed 65°C temp, regulating the internal temp, IP67. Ideal for electric towel rails where no direct temperature control is required.
not available	BLOWER		Electric add-on convector heater for instant heat to cold rooms, fits any towel rail (with circular or flat bars) with a gap between the rear of the bars and the wall of 90mm. 5 heat settings, boost function (up to 90 minutes). Can also be ordered as a Blower + TS3 element probe combination unit, whereby element fits inside electric radiator and additional convector sits behind bars.

introducing...  
Terma SMART WiFi System

A fully centralised electric heating system for the home with inherent intelligence thanks to Terma SMART – a revolutionary solution. This new family of wifi controlled electric heating devices is a system with complete flexibility that learns and adapts to your needs. Thanks to intelligent control, you can save energy from anywhere.

In the context of Electric Radiators, the primary features of the VEO heating element are:

- SMART WiFi connectivity with no requirement for a bridge or hub. The element will connect directly to your app via your router.
- Power output ranging from 120w up to 2000w. Our only heating element which is capable of delivering the higher outputs of 1.8 and 2.0 kw - so perfect for our large room radiators (e.g. Rolo Room) and for Cast Iron radiators.
- The VEO heating element and VAZ TRV head both have a modern ergonomic design with a black or white front fascia colour while the outer clamshell covers can be painted in any premium wet paint to match the radiator. We showcase the VEO across pages 24 to 42, where you'll see the element fully colour matched to respective radiators it is presented with.
- Suitable for vertical or horizontal installation. Sold as a VEO controller and a separate SMART Split heating probe.
- Choice of internal or ambient room temperature control. Features geo location operation so knows when you're nearing home and will automatically switch the temperature up for you. See Page 24 for more info about VEO.

When buying SMART products for the home (e.g. smart bulbs, smart plugs, audio/video appliances) you will go to a manufacturer you can trust for a complete suite of matching products. These needs are fully met by the Terma SMART system - an intelligent heating system which works with your both your electric radiators or your central heating system (via the TRVs).

In the wider context of a Smart Home in the modern world, the emphasis is primarily on security through monitoring systems, alarm systems, motion sensors, smoke detectors or intelligent heating. To complement this desire the Terma VEO/VAZ models are both equipped with anti-freeze protection (ANTIFROST) and the devices can also signal alarm conditions, e.g. low battery level, through the app.

We have created a range of YouTube videos to help you better understand our SMART system. Find out more information on our YouTube channel [www.youtube.com/@Terma\\_Group](https://www.youtube.com/@Terma_Group).

Our next commercial concept space is a Bauhaus-style interior, which reflects the principles of this iconic design movement.

In this interior, the colours have been selected to complement and enhance the shades used within the interiors, creating a harmonious and balanced environment.

Bauhaus styling is characterised by its focus on functionality, simplicity and the use of geometric shapes. This design philosophy emphasises clean lines, open spaces, and a minimalist aesthetic, all while maintaining a high level of craftsmanship and attention to detail. In this Bauhaus-inspired space, Terma radiators are integrated seamlessly with their sleek designs.

Inspired by PANTONE  
Colour of the Year 2024

Peach Fuzz

Our next commercial concept space focuses on a relaxation spa. In this serene setting, the Pantone colour of the year for 2024, Peach Fuzz, is prominently featured. Pantone selected Peach Fuzz for its ability to convey optimism and a sense of tranquility, qualities that are essential in spaces designed for unwinding and healing - making it an ideal choice for a spa environment where creating a peaceful atmosphere is paramount.

Spas are designed to be sanctuaries from the stresses of daily life, offering a place where individuals can escape and indulge in self-care. The use of Peach Fuzz throughout this concept space enhances the spa's ability to provide a restful and rejuvenating experience. The warm, inviting colour works in harmony with the minimalist design and high-quality craftsmanship of Terma radiators, demonstrating how thoughtful design choices can elevate the ambiance of a space.

features & benefits

- Full Wi-Fi control via app (terma smart iOS/Android).
- High outputs of 1500w, 1800w and 2000w ideal for large radiators/cast iron (\*see guidance notes on higher wattage elements).
- Regulates ambient room temp 15-28°C.
- 7 day timer.
- Geo location operation knows when you're home.
- Use with VTS temp/humidity sensor and VOS open window sensor for precise control.
- 75.6mm length from thread down.
- 70.5mm diameter clock shaped face.
- 2x buttons: temp +/- Frost & overheating protection.
- 230v. 1px5. Guarantee: 2 years.
- Note: 110-120v/60Hz (USA/Canada) available - certified from approx. July 2025.
- Requires 1x smart split heating probe (sold separately).
- Note: When ordering VEO we provide the probe and controller complete as part of your order (unlike the KTX range where you need to order the controller separately). Ask us if you need clarification.Available with a masking cover which covers the wire at the rear of the element.

**\*IMPORTANT:** The higher wattage 1500w, 1800w & 2000w are very powerful elements with very long probes (see table, right). Note: These probes shouldn't be longer than 70% of radiator length. For Class 1 probes: 1500w = rad 1257mm+ in length; 1800w = rad 1450mm+ in length; 2000w = rad 1642mm+ in length.

VEO (along with the KTX range) are the best elements for horizontal installation in a radiator. See page 125 for more important notes on horizontal installation of an element.

smart split probe (for VEO/SEO)

600W (500)	2000W (1185)

terma SMART app

The Terma SMART app manages all Wi-Fi products we offer (see page 14). It is free to download and is available for iOS and Android and will work on any smartphone or tablet.

The app allows you to divide the home into heating zones, setting separate schedules for each, managed by the ambient temperature. Including the optional VTS wall-mounted temperature sensor will give better results as you can position this in the optimum location (not solely relying on the temp sensors built into the element). The self-learning Early Start function has three operating modes: Comfort, Balanced and Economic which are all SMART and over time will learn the preferences of the user. The Geo location functionality aids this by registering when users are in or out of the home. The Anti Frost (optional) VOS open window sensor remains active at all times ready to kick in when required to turn on or off the heating.

VEO (class 1)

SEO (class 2)

- Our NEW State-of-the-Art premium SMART Wi-Fi connectivity element.
- Choice of black or white front fascia.
- Outer clamshell covers available in any premium wet paint colour (palette shown on page 121) to match the radiator.
- Choice of internal or ambient room temperature control.
- Suitable for vertical or horizontal installation.
- Power output of 120w up to 2000w. Our only element which provides 1.8 and 2.0 kw outputs - so perfect for our large room radiators (e.g. Rolo Room / Delfin / Oxford / Plain 2 Column etc).

class 1

class 2

**\*Note:** Class 2 is a double-insulated electrical device that has no earth wire – typical for installations in France / Spain (but can be used anywhere).

Class 1 is standard where an earth wire is used.

# features & benefits

- MOA Blue / SOA Blue:
  - MOA Blue: Choice of internal temp (30-60°C) or ambient room temp (15-30°C).
  - SOA Blue: Choice of 5 heat settings (30-100% power).
- Full Bluetooth control via app (Terma blue-line iOS / Android).
- Can also be manually controlled with buttons on element.
- LEDs denote the temperature setting.
- Full 7 day timer.
- 2hr drying function.
- Lot20 Ecodesign Directive compliant (timer & adaptive start control).
- 66mm length from thread down.
- 55mm diameter clock-shaped face.
- 230v. IPx5.
- Note: 110-120v/60Hz (USA/Canada) available - certified from approx. July 2025.
- Guarantee: 2 years.
- Note: The Class 1 version of these elements are best used vertically, for notes on best elements for horizontal installation see page 125. The Class 2 version is suitable for horizontal installation.

## MOA BLUE (class 1)

## SOA BLUE (class 2)

- Bluetooth connectivity element.
- Choice of Chrome, White, Black or Silver case.
- Choice of internal or ambient room temperature control (MOA Blue) / 5 heat settings (SOA Blue)
- Power output of 120w up to 1200w (MOA Blue) or 200w up to 1000w (SOA Blue).

class 1

class 2

**\*Note:** Class 2 is a double-insulated electrical device that has no earth wire – typical for installations in France / Spain (but can be used anywhere).

Class 1 is standard where an earth wire is used.

## HEATING ELEMENT

-  MOA Blue (bluetooth) (spiral cable)
-  Black
-  600w

# features & benefits

- MOA / SOA:
  - MOA (class 1): 5 heat settings 30-60°C regulating internal rad temp.
  - SOA (class 2): 5 heat settings (30 to 100% power).
- MOA IR:
  - MOA IR (class 1): Infrared connectivity element with a built in IR receiver for use with the separate DT-IR or TT-IR infrared controllers.
- TDY:
  - TDY (class 1): 3 set temps of 40, 50 or 60°C. Auto power-off functions designed for hotel use as will always turn itself off after set time, pre-set is 120min, can vary between 60 and 180 minutes.
- DRY / SEC:
  - DRY (class 1): Pre set operating temperature of 48°C.
  - SEC (class 2): Pre set operating power of 100% but can be adjusted to 30, 40, 60 or 80%.
- 66mm length from thread down.
- 55mm diameter clockshaped face.
- 4x buttons: temp +/-, dryer, power.
- frost and overheating protection.
- 230v. 1px5.

- Note: 110-120v/60Hz (USA/Canada) available - certified from approx. July 2025.
- Guarantee: 2 years.
- Note: The Class 1 version of these elements are best used vertically, for notes on best elements for horizontal installation see page 125. The Class 2 version is suitable for horizontal installation.

**MOA | MOA IR | DRY | TDY**

**(class 1)**

**SOA | SEC**

**(class 2)**

- MOA/SOA: Manually controlled element with membrane fascia.
- MOA IR: Infrared controlled element (with separate controller).
- TDY: Specially designed for hotels with auto shut-off feature.
- DRY/SEC: Pre programmed set operating temperatures.
- Choice of chrome, white, black, silver or gold case.
- Power output of 120w up to 1200w (MOA/DRY) or 100w up to 1000w (SOA/SEC).

**class 1**

**class 2**

**\*Note:** Class 2 is a double-insulated electrical device that has no earth wire – typical for installations in France / Spain (but can be used anywhere).

  - 1315×500
  - RAL 4010
- HEATING ELEMENT**
  - TDY (for hotels) (shown with cable masking)
  - White
  - 1.0kw

# features & benefits

- Manually controlled.
- 5 heat settings 30-60°C regulating internal radiator temp.
- No timer. No 2hr drying function.
- Compatible with external timer as it remembers settings when off.
- 66mm length from thread down.
- 55mm diameter clockshaped face.
- 3x buttons: power, temp +/-.
- Frost & overheating protection.
- 230v. IPx4.
- Note: 110-120v/60Hz (USA/Canada) available - certified from approx. July 2025.
- Guarantee: 2 years.
- Note: These elements are best used vertically, for notes on best elements for horizontal installation see page 125.

# MEG (class 1)

- Entry-level manually controlled element with rubber buttons.
- Choice of chrome, white, black or silver case.
- Power output of 120w up to 1200w

# LEO E

**note:** Leo is an entry-level contracts product and is not listed on the Terma website. We can also provide Leo in a curved design—please enquire for more details. This product is available only in white and chrome finishes; however, a PVD gold finish is also a new option (see page 82).

## RADIATOR

- Leo E
- 1200×500
- Chrome

## HEATING ELEMENT

- MEG
- Chrome
- 300w

# features & benefits

- Full bluetooth control via app (terma blue-line iOS/Android).
- Can also be manually controlled with buttons on element.
- Choice of internal temp (30-60°C) or ambient room temp (15-30°C).
- 7 day timer. 1-4hr drying function.
- Lot20 ecodesign directive compliant (timer & adaptive start control).
- 82.5mm length from thread down.
- 67mm square shaped face.
- Frost & overheating protection.
- 230v. Ipx5.
- Note: 110-120v/60Hz (USA/Canada) available - certified from approx. July 2025.
- Guarantee: 2 years.
- Requires 1x TS1 heating probe (sold separately).
- Controller rotates 340° to face required direction once pushed onto probe.
- Note: When ordering KTX you need to order the controller separately in addition to the radiator (which will be pre supplied with the probe only) (unlike the VEO range where we offer both probe and controller combined as part of your order). Ask us if you need clarification.

## RADIATOR

-  Nemo E
-  530×915
-  Metallic Stone

## HEATING ELEMENT

-  KTX 4 Blue (bluetooth)
-  Silver
-  800w TS1 / TS2 probe

# features & benefits

- KTX 4: Manually controlled or infrared with the addition of the separate DTIR or TTIR infrared controller (see pages 114 and 116).
- KTX 1 to 3: Manually controlled.
- Please see the comparisons table on page 128 for the specific differences between KTX 1 up to KTX 4
- 82.5mm length from thread down.
- 67mm square-shaped face.
- Frost & overheating protection.
- 230v. IPx5.
- Note: 110-120v/60Hz (USA/Canada) available - certified from approx. July 2025.
- Guarantee: 2 years.
- Requires 1x TS1 / TS2 heating probe (sold separately).
- Controller rotates 340° to face required direction once pushed onto probe.
- Note: When ordering KTX, you need to order the controller separately in addition to the radiator (which will be supplied with the probe only), unlike the VEO range, where we offer both probe and controller combined as part of your order. Ask us if you need clarification.

## TS1 Probe (Class 1)

500w (375)	
600w (465)	

KTX 1 to 4 is also available with a masking cover. It must be pre-manufactured this way and cannot be retro fitted later. See page 132 for codes.

**IR**

**KTX 1 to 4 (class 1)**

**SKT 1 to 4 (class 2)**

- Series of Square Shape Elements.
  - KTX-4: Temperature controlled element with built-in infrared receiver.
  - KTX-1 to 3: Older more simplified versions of the element. Please see page 128 for the specifics of these models.
- Choice of chrome, white, black or silver case.
- Suitable for vertical or horizontal installation.
- Power output of 120w up to 1000w.

**class 1**

**class 2**

**\*Note:** Class 2 is a double-insulated electrical device that has no earth wire – typical for installations in France / Spain (but can be used anywhere).

Class 1 is standard where an earth wire is used.

# LEO E

**note:** PVD Gold is only available on the Leo range and not all other models. Our standard gold colours for all other models are shown on pages 118 to 123. At time of printing this colour is new – so please check with us for latest product codes/config for PVD Gold.”

**note:** Leo is an entry level contracts product and does not appear on the Terma website. We can also offer Leo in curved - enquire for more. We do not offer Leo in the full Terma colour palette - only white & chrome (and Gold as seen here). See page 66 for chrome.

800w TS1 / TS2 probe

# features & benefits

- Manually controlled or infrared with the addition of the separate DTIR or TTIR infrared controller (see pages 114 and 116).
- Series of uniquely shaped element to match profile of Terma radiators.
- 2 heat settings: 45 or 60°c regulating the internal radiator temp.
- One discreet underside button.
- No timer\*.
  - \*Compatible with TTIR / DTIR infrared controller to add timer control.
- 2hr drying function.
- Frost & overheating protection.
- 230v. IPx5.
- Note: At time of printing 110-120v/60Hz (USA/Canada) not available on the ONE element. Please enquire if any changes in future.
- Guarantee: 2 years.
- Note: The Internal ONE cannot be retro fitted and the radiator must be manufactured this way.

# choice of shapes

- We offer the ONE element in five different shapes. The vast majority of the profiles on the Terma selection of radiators are available in these shapes.
- When you specify ONE as your choice of element we will match the shape automatically.
- These are the external versions of ONE shown in all 5 shapes. The internal version will only feature the black section at the bottom of these images, at the bottom of your radiator.

ONE R36

ONE D 30x40

ONE K 30x30

ONE P 30x40

ONE T 36x40

**ONE external (class 1)**

**ONE internal (class 1)**

- Series of Uniquely Shaped Elements Produced in Matching Profiles to Terma radiators.
- Can be bought as:
  - EXTERNAL: Standard external element which can be retro fit and replaced as needed.
  - INTERNAL: Unique internalised heating element where all electronics are pushed up inside the radiator, so all you see is a very small black extension piece at the bottom; the cable can be concealed through the mounting bracket located above the element.
- Element will be colour-matched to the radiator if ordered together.
- Power output of 120w up to 1000w.

# ALEX ONE

**note:** ONE after the name means this range comes with the internal ONE element. We also offer ALEX as standard electric (any other element) where there is also an additional 540 high model available. See website for standard electric ALEX E.

# features & benefits

- Entry-level element, fixed stainless head.
- Fixed 65°c setting, regulating internal radiator temp.
- Power supply controlled from the switched fused spur (no power button on element itself).
- 26mm length from thread down.
- 230v. IP67.
- Note: 110-120v/60Hz (USA/Canada) available - certified from approx. July 2025.
- Guarantee: 2 years.

**SIM** (class 1)

**SIS** (class 2)

- Our entry-level heating element perfect for use in electric towel rails where no temperature control might be required.
- Stainless steel head.
- Suitable for vertical or horizontal installation.
- Power output of 100w up to 1500w

class 1

class 2

**\*Note:** Class 2 is a double-insulated electrical device that has no earth wire – typical for installations in France / Spain (but can be used anywhere).

Class 1 is standard where an earth wire is used.

# FIONA E

**note:** Also available in additional widths of 400, 430, 480, 530, 580, 600, 630 and 680. See our website for images and details of these additional sizes.

# features & benefits

- Fits any towel rail (with circular or flat bars) with a gap between the rear of the bars and the wall of 90mm.
- 5 heat settings.
- Boost function (up to 90minutes).
- Can be ordered as standalone unit and retro fitted to existing towel rail.
- Can also be ordered as a complete unit of “Blower + Electric Towel Rail” (with a TS3 element probe where element fits inside to electrify the radiator and Blower sits behind bars).
- 400mm width and 239mm height. 95mm deep.
- 230v. IP27.
- Guarantee: 2 years.

# BLOWER (class 2)

- Blower is an electric convector heater add-on for towel rail (this could be fitted to either an hydronic (central heating) towel rail or to an electric towel rail).
- Available in white (RAL 9016) or silver aluminium (RAL 9006).
- Provides the extra functionality of very quick heat up times in cold spaces.
- Power Output: 1.0kw (additional outputs of 400w up to 1000w achieved with the addition of a TS3 heating element).

class 1

class 2

**\*Note:** Class 2 is a double-insulated electrical device that has no earth wire – typical for installations in France / Spain (but can be used anywhere).

- RADIATOR**
- Angus E
  - 1620×600
  - Champagne

- HEATING ELEMENT & CONTROLLER**
- KTX 4 with TTIR Controller
  - White
  - 1.0kw

### DTIR (infrared controller)

- Wall-mounted IR programmer.
- Works with any Terma heating element with built in IR receiver (MOA IR / Internal ONE / External ONE / KTX 4).
- Allows temperature control ranging from 10-30°C in steps of 0.5°C.
- 24 hour timer control in intervals as short as 15 minutes.
- 15 minute – 4 hour dryer function.

### VOS (open window sensor)

VOS open window sensor which works as part of the Terma SMART range (compatible with VEO heating element / VAZ TRV Head).

### CABLE MASKING (seen right)

- Plastic cable masking cover for round clock face elements (MEG, MOA, MOA IR, SOA, MOA BLUE, SOA BLUE, TDY and 43D).
- These can be ordered as standalone accessory to retro fit to the heating element at any point after fitting.
- Fully conceals the wire in a casing matching the colour of element.
- Available in chrome, white, black, silver and gold.
- Can be cut to desired length based on depth of towel rail / radiator = ranging between 30 and 65mm from the back of the heating element to the wall.
- Note: Some heating elements can be ordered inclusive of a masking cover as one complete unit. See the config guides at rear to see which elements are available complete with masking.

### VTS (wall mounted thermostat)

VTS temp & humidity sensor which works as part of the Terma SMART range (compatible with VEO heating element / VAZ TRV Head).

### ACCESSORY Cable Masking Cover

# COLOUR PALETTE: terma special colours

- You can order any model in any special colour or RAL colour.
- We gladly accept single unit orders, perfect for domestic customers seeking a unique radiator.
- Here are the special colours on offer from Terma all of which are powder-coated colours.

## CHROME

Chrome **CRO**

**Chrome Notes:** Radiators finished in chrome have a lower heat output compared to painted versions, as the chrome plating insulates and retains heat (similar to how foil wraps a potato in the oven). All outputs listed in this brochure are based on painted finishes. For the reduced heat outputs of chrome radiators, please visit our website.

## COPPER

Raw copper **MIE**

## COLOUR PALETTE: premium (wet paint) colours

- These are the premium (wet paint) colours on offer from Terma.
- These carry a 25% surcharge as they are painted by hand using specialist paint.
- We are pleased to announce that we can now do any of our radiators\* in the premium (wet paint) colours. Previously the range was limited where there were very small gaps between bars – but improvements in the operation now mean we can do all models.
- \*Exceptions - Brushed Brass – this colour (as shown below) has a hand-painted black over pattern – due to the nature of how this is applied we cannot provide this colour on these models: Angus, Cane, Hex, PLC, Triga and Sherwood.

## colours information

- We offer RAL as standard in a silk finish.
- We also offer each RAL colour in:
- MAT – a matt finish
- SOFT – a double layer super matt finish. Soft is 25% more expensive than Silk or Matt. Note: Uplift applies to all Soft colours except these which have no uplift in Soft: RAL 9016 (White), RAL 9005 (Black) RAL 7047 (Light Grey), RAL 4010 (Pink), RAL 4006 (Pink), RAL 3028 (Red), RAL 1023 (Yellow). Note: Correct as at the time of printing and is subject to change.
- Please ensure you choose the correct code for the colour and finish you require.

# TECHNICAL ADVICE

## wattage selection advice

As Terma manufactures both elements and radiators, we electrify, and have expert knowledge in combining the two together. Here is some key advice regarding heating elements.

For all electric radiators supplied by Terma we specify what the output will be as electric which denotes the wattage of heating element that model will be supplied with if ordered as electric. This brochure tells you the wattage of each element for each size within a range and also tells you the suggested element as you will be limited to certain ranges of element depending which element is needed. On our website within the description page of each radiator, you can find a specification table that includes a column (marked with the electrical socket symbol. The power of an electric heater or heater) indicating the wattages of the electric radiator in its given size.

When electrifying a radiator yourself it is very important to correctly choose the right wattage of element for your radiator (i.e. putting a Terma heating element into another manufacturers radiator or setting up a Terma radiator as dual fuel – where you will order the element yourself) (for more information on dual fuel - see next page). To do this you should look at the output of the chosen radiator as central heating (hydronic) under the 75/65/20°C parameters where you'll see the output listed in watts and choose an element whose wattage is in the range of:

- 80 to 110% (if using Class 1 heating elements)
- 75 to 100% (if using Class 2 heating elements (e.g. SEO, SOA, SEC, SKT, SIS)).

**Note:** If your output of the chosen radiator is only listed in BTUs (British Thermal Units as used in the UK), the conversion formula is  $BTUS / 3.41 = \text{Watts}$ .

A heating element with wattage selected in accordance with the above criteria will work safely and effectively.

## electrification advice

When making the decision to electrify any towel rail or radiator it is important to check with the manufacturer of that model that it is suitable to work with a heating element. Not all towel rails or radiators are suitable dependant on their design and how the heat will cycle internally around the rail, so avoid electrifying certain models as they won't work and this will not be the fault of the element and the Terma warranty will not cover the replacement of the element in these cases.

## heating medium & air cushion

All Terma electric radiators are oil filled. Oil is the optimum heating medium due to its thermal properties and the fact it will not easily freeze. If filling a rail or radiator yourself you can use 85% water with 15% ethylene glycol (simply use central heating inhibitor and boiler noise silencer from a DIY store - a capful of each will suffice). The heating medium inside (the water or oil) will expand when hot, so you must ensure you leave a gap at the top of the liquid to allow for this thermal expansion, so only fill your rail or radiator to approx. 90-95% full inside.

## safety features

All Terma heating elements have multiple built in safety features.

There is software to constantly monitor the temperature inside the radiator. In the event of a rapid increase in temperature the software will immediately switch off the heating element preventing the risk of excessive heating. This is a preventative measure minimising the risk of overheating.

The second feature is the thermal fuse which is a mechanical feature located in the capillary of the internal structure. If the heating element reaches a certain temperature the fuse will automatically cut the power supply to the element. Thanks to this action the element is no longer exposed to this heat reducing the risk of damage.

## Good to Know for Installers – Don't Test Heating Elements in the Open Air

The heating elements should not be run dry in the open air as this will cause the thermal fuse to blow. Some fitters like to turn on a heating element in the open air and touch the probe to see if it is getting hot. This is misuse of the element as after approx 8 to 10 seconds the thermal fuse will blow. This is the same as you would not run a kettle dry with no water in. We are highlighting this here as this is a common issue we find. These elements are not then covered under warranty as we state in the manuals not to run these dry like this.

## horizontal installation of element

Any Terma heating element can be installed vertically in a radiator or towel rail. However when installing a Class 1 element horizontally we advise that you only choose either the KTX or VEO ranges. These ranges are supplied with separate heating probes to the controllers meaning that you have control over the correct positioning of the probe inside the radiator to ensure accurate temperature control. On our Class 1 probes as seen in the image the shorter capillary (next to the longer probe) needs to be positioned underneath the long probe inside. If this is positioned above the

probe it can cause erroneous temperature readings and the element will not function correctly to heat the radiator. There is a nodule on the outer brass head of the probe to denote where the shorter capillary is should be located between 4 and 8 o'clock as seen (in the 150 degree positions). When Terma manufactures electric radiators we ensure this is already done for you.

**Note:** All Class 2 elements or the SIM ranges will also be fine for horizontal installation (but SIM entry level elements have no temperature control so aren't often put in horizontal radiators).

**Essential Maintenance of any Heating Element Installed as Dual Fuel (see page 127 for more info on Dual Fuel)**

**IMPORTANT:** Essential maintenance for the safe use of a Terma heating element installed as dual fuel (note: this does not apply to standalone electric towel rails). If this maintenance is not carried out, this could potentially cause the surface to get very hot and towels stored on it could catch fire.

To explain: A dual fuel towel rail is not a sealed unit (like a standalone electric model), therefore as the water flows in / out from the boiler air can build up at the top over time. Therefore it is essential to regularly bleed (vent) a dual fuel towel rail to release any build of air, we suggest every 6 months or so.

When the towel rail is cold – simply turn the top air vent anti clockwise to open it you'll hear any air build up hiss and release, when see water you can close the vent.

Failure to do this could mean the upper tip of your heating element probe may be heating dry and elements must be fully submerged in solution (just like inside your kettle). They are safely designed cut out when used in open air - but they won't cut out when only partially in open air around the tip. So this is the risk to be very cautious off.

So just like you would not allow fluff to build up in your tumble dryer as this could cause a fire – don't allow air to build up at the top of your dual fuel towel rail for the very same reason. Terma supply safety stickers in our heating elements for the electrician to stick to any dual fuel towel rail advising users of this essential maintenance.

**element location (left or right hand side)**

**Note:** Most of the radiators showcased in this brochure are manufactured as electric only versions – so the tapping (opening) where the element is to be installed, will be the only one – so once made you cannot move the element to the other side. There are a few exceptions to this where certain towel rails are pre made with multiple tappings (Leo for example). Please check this with us if you are not sure.

**Note:** If you request a made-to-order model with E1 (left) or E8 (right) connections there will not be a second tapping on the opposite side. If you would like the flexibility of being able to move the element to the opposite side if needed, you must specify ES (left/right) connections (see page 132 for connections).

## where to locate your electric radiator

The best place to install any radiator is on an outside wall and under or next to a window where possible. The cold air coming in through the window can then be heated by the warmth from the radiator ensuring the ambient room temperature is achieved quickest by mixing these two differing temperatures together at the earliest opportunity and not letting the cold air travel too far into the room before it is mixed with the warm air from the radiator. In lots of modern open spaces there is often multiple radiators and the secondary ones can be placed where required for the best overall ambient temperature.

## bathroom installation

**Zone 0** – is the area inside the water. You don't install here.

**Zone 1** is the area directly above the water. You don't install here. Why? With an electric towel rail installed over a bath, if the user slipped and grabbed the towel rail they could pull this off into the water and electrocute themselves.

**Zone 2** and beyond is the safe zone which is only next to areas of water.

- IEC 60364 is the International Electrotechnical Commission (IEC)'s international standard on electrical installations of buildings.
- BS 7671 are the electrical wiring regulations and standards in the UK.

## IP rating for splash protection

All Terma heating elements are IP rated meaning they are safe for use in the bathroom. IP stands for Ingress Protection and denotes the protection against the intrusion of dust or moisture into a device. There will be 2 digits in the IP rating and the first one refers to dust and the second one moisture. So in the case of how Terma specify these it may be X4 or 54 as the first digit is irrelevant as we are only concerned with the second digit. Any second digit of 4 or higher is perfectly safe for use in a bathroom where the heating element may be splashed with water.

## specifying the cable type

**Note:** In the UK you cannot have plugs in a bathroom so when ordering your cable you should choose the P type connection which has no plug on the end – which means the electric radiator will be wired into a fused spur with the switch on the outside.

## running costs of electric radiators

## what is dual fuel

A T Piece is essentially the key component of the setup, as the T-Piece enables you to connect both the valve (for the central heating) and the element (for the electrical supply) to the same valve entry point (tapping) on the heated towel rail.

key to prefix on product codes

All Terma models require a PRODUCT CODE and an additional CONFIGURATION CODE.

You can find the PRODUCT CODE for your selected model in this brochure or on our website. Here is a useful key to understanding what the two pre fix letters on the PRODUCT CODE mean, in relation to electric / dual fuel models:

- **WL** – electric towel rail or radiator filled with Oil and fitted with a factory installed heating element
- **WW** – electric towel rail or radiator filled with oil, with built-in ONE heating element
- **WZ** – a dual fuel towel rail or radiator with internal ONE heating element; no oil as will connect to central heating system
- **WK** – Voltan electric radiator
- **WI** – SMART accessories
- **WE** – the BLOWER convector heater add on device
- **WG** – prefix for hydronic (central heating) models - so you may use this to order dual fuel models – but this will never be used for electric only models.

connection codes for electric / dual fuel

creating a config for a product with a WZ prefix – a dual fuel towel rail or radiator with internal ONE heating element; no oil as will connect to central heating system

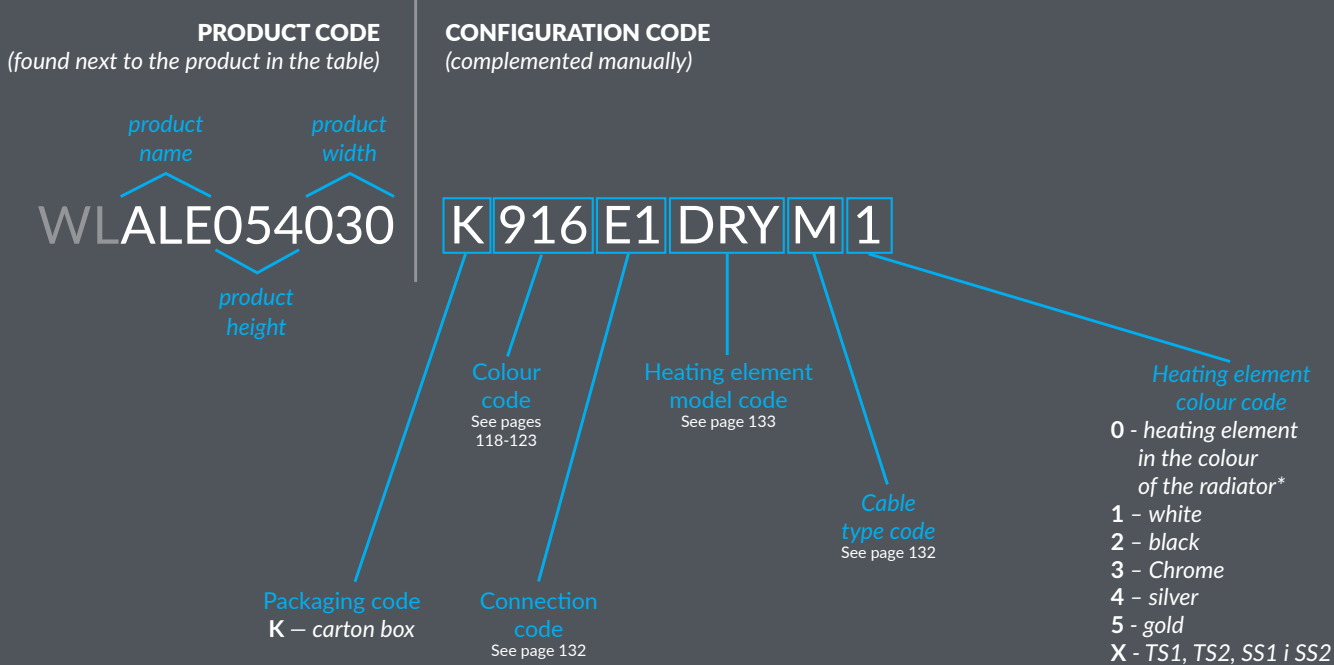

You can find the PRODUCT CODE for your selected model in this brochure or on our website. This guide explains how to create the additional CONFIGURATION CODE needed, which outlines the customisable options for your electric radiator. It includes key details such as colour, connection type, and cable options for your heating element. If creating the configuration feels challenging, you can use the made-to-order tear-out forms at the back of the brochure. Simply fill out the form, and we'll generate the configuration for you based on your selections.

# creating a config for a product with a WL prefix - an electric towel rail or radiator filled with oil and fitted with a factory installed

You can find the PRODUCT CODE for your selected model in this brochure or on our website. This guide explains how to create the additional CONFIGURATION CODE needed, which outlines the customisable options for your electric radiator. It includes key details such as colour, connection type, and cable options for your heating element. If creating the configuration feels challenging, you can use the made-to-order tear-out forms at the back of the brochure. Simply fill out the form, and we'll generate the configuration for you based on your selections.

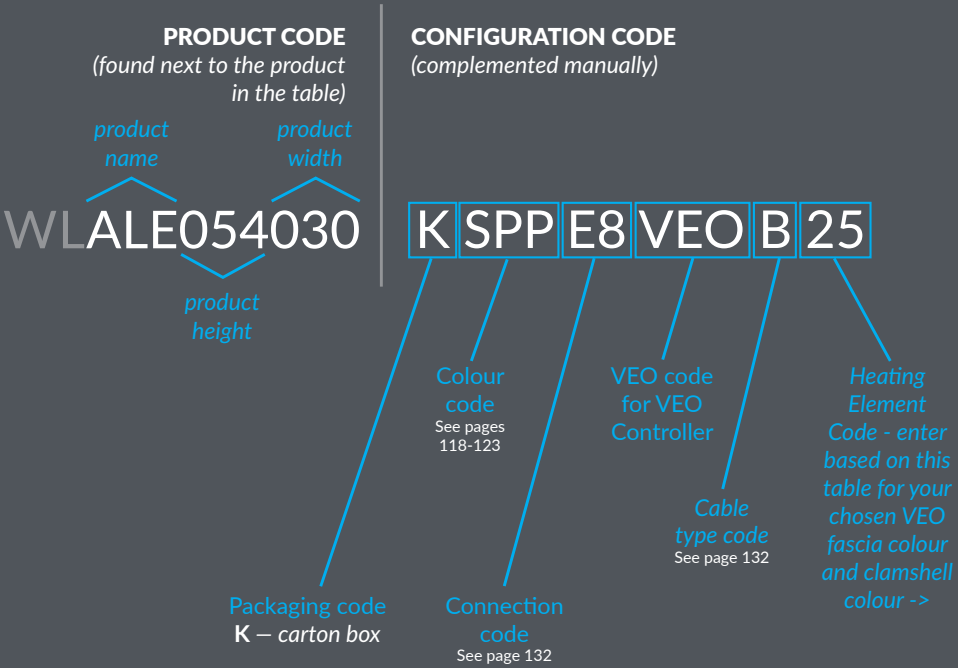

Heating element color designations refer to („Heating element color code”):

- \* 0 — ONE heating element only. If the color of the ONE is different from the color of the radiator, an unusual configuration should be assumed.
- 1-4 — MEG, MOA, MOA IR, MOA BLUE, DRY, TDY as well as REG2 and REG3 heating elements
- 5 — MEG, MOA, MOA IR, DRY, TDY heating elements

In the case of a heater with a SIM and SIS heating element, the last character of the configuration code indicates the color of the heating element cable: 1 - white, 4 - silver. For heating devices with a detachable controller (KTX, SKT, VEO, SEO, BL1) the TS1, TS2, TS3, SS1 or SS2 heating rods must be configured as a part of the electric radiator (code WL). The electronic controller of the device (KTX, BL1) should be configured as a separate product in the order.

# key for the two digit VEO code for specifying the fascia colour / clamshell colour – applies to VEO controller only

**NOTE:** With the VEO and Smart Split these will both be supplied with your radiator.

## FASCIA COLOUR AND CLAMSHELL COLOUR

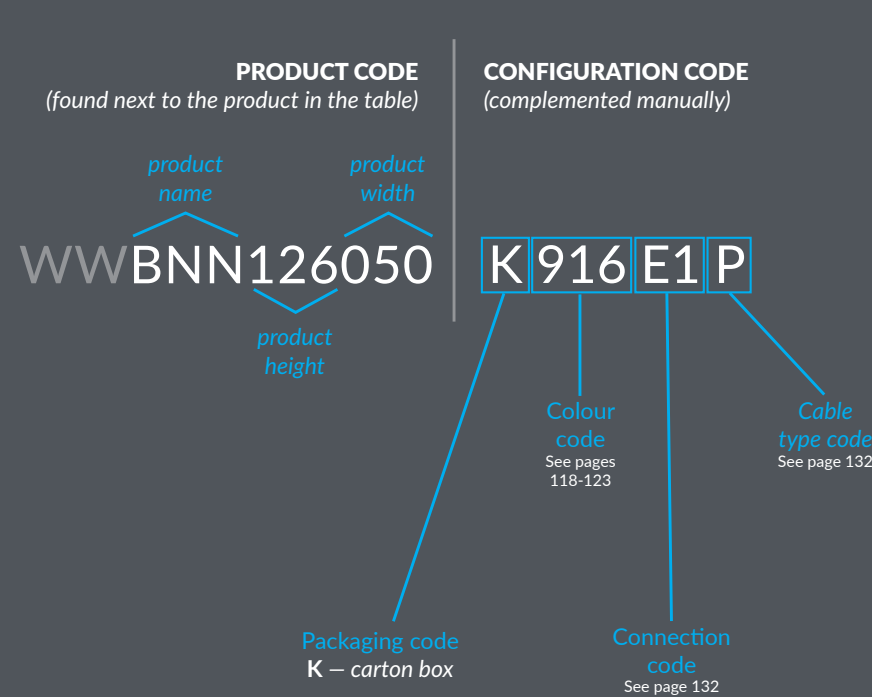

Element Colour Code	Fascia Colour of the VEO	Clamshell Colour (Wet Paints Only)
01	916 (White)	916 (White)
02	905 (Black)	905 (Black)

32	905 (Black)	SVR (Silver)

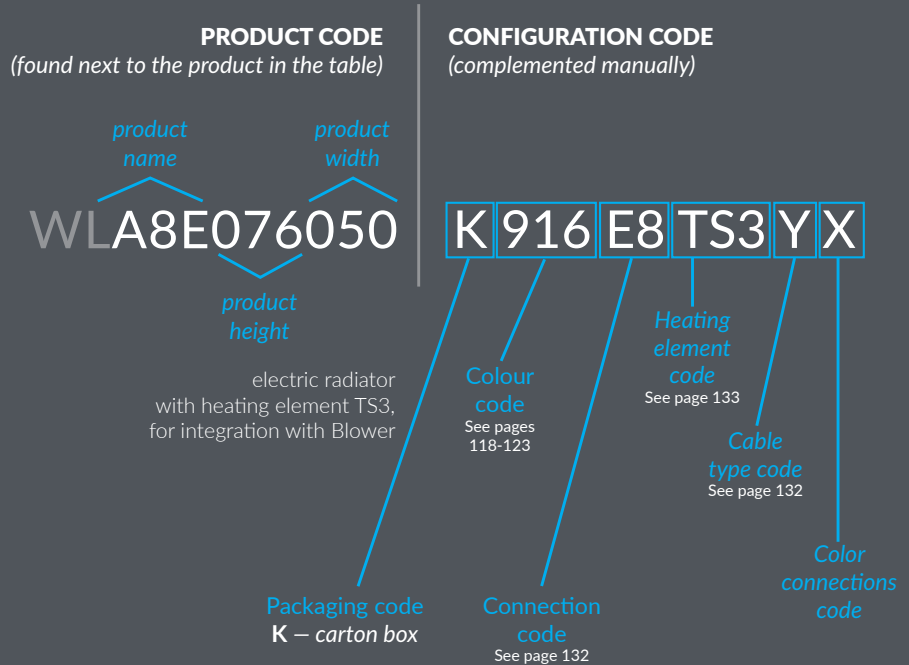

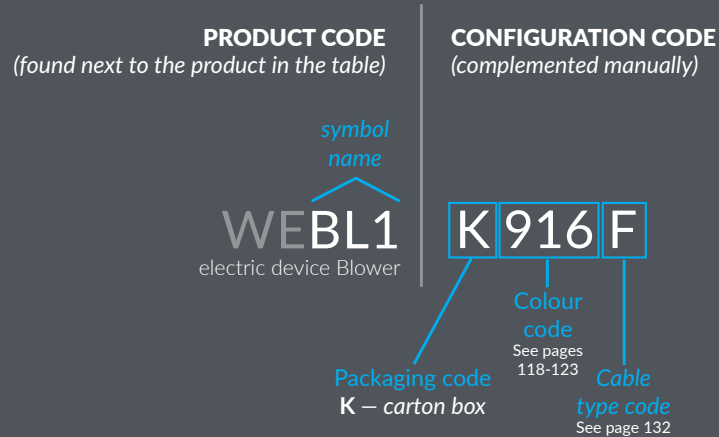

# creating a config for a product with a WW prefix – an electric towel rail or radiator filled with oil and fitted with a factory installed internal ONE heating element

You can find the PRODUCT CODE for your selected model in this brochure or on our website. This guide explains how to create the additional CONFIGURATION CODE needed, which outlines the customisable options for your electric radiator. It includes key details such as colour, connection type, and cable options for your heating element. If creating the configuration feels challenging, you can use the made-to-order tear-out forms at the back of the brochure. Simply fill out the form, and we'll generate the configuration for you based on your selections.

# creating a config for a product with a WE prefix – an electric towel rail or radiator with BLOWER convector heater add on (or WL prefix if ordering with a TS3 element)

Product codes can be found in the product tables in both the catalogue and the price list. They provide basic information about the product, and the configuration code contains information that complements the specification. When placing an order, the product codes should contain the fully completed configuration part. Part of the configuration code should be placed after the main product code as shown in the example below:

tear out distributor enquiry form

- Distributors - Use this form to list the Terma models you have an interest in distributing to open communication with us about your requirements.
- Once submitted, we will connect you with the appropriate sales contact to begin discussions based on your needs and interests.
- Scan & email form to: orders-heating@termagroup.pl (International) or sales@termagroup.co.uk (UK) / For digital version of form please email us.

tear out: single unit made-to-order form for an electric radiator

- Showrooms / Radiator Specialists - Use this form to order for single unit made-to-order radiator.
- We advise you go through each question carefully with the end user so they can make an informed decision about all the specifics of their electric radiator. These are made-to-order models with lots of configurable parts, so allow them to make their own informed choices:
  - e.g. Would they prefer the heating element on the left or right side dependant on where their electric supply will come.
  - e.g. would they prefer a straight or curly cable
  - etc, etc
- Scan & email form to: orders-heating@termagroup.pl (International) or mto@termagroup.co.uk (UK) / For digital version of form please email us.

DISTRIBUTOR ENQUIRY FORM

## TERMA... we electrify

Terma proudly showcases the marrying of our exquisite radiator designs and technologically advanced heating elements. This brochure showcases the vast majority of oil filled electric radiators on offer from Terma.

## Lead times

All models enclosed can be ordered on a Made-To-Order (MTO) single unit basis, or on a wholesale basis for large distribution partners.

Approximate Lead Times for Oil Filled Electric Models:

Powder Paint (Special Colours or RAL):	5 to 10 weeks.
Premium (Wet Paint) Finishes:	Additional 2 weeks.

**Important:** Lead times vary dependent on the model – please ask for specific lead times for your chosen model as these could differ. Lead times can be extended for a variety of reasons but we endeavour to manufacture in line within the timeframe we state. Note: MTO orders cannot be cancelled once they have gone into production.

## stock models

We carry certain electric models in stock at our warehouses located in the UK and in Poland. UK Stock: We have a separate brochure which details all the UK stock. Please request a postal copy by phone / email or visit the UK website [www.termaheat.co.uk](http://www.termaheat.co.uk) to view this as a PDF. Poland Stock: Please see the international website which denotes some of the stock models. Note: We don't include details of what we carry in stock in this brochure.
